ADDED VALUE SERVICES

CHALLENGES AND OPPORTUNITIES Asset Managers are faced with increasingly restrictive local and global regulations, cultural specificities in distribution markets and rising complexity of data management in a world where CSD and TA models co-exist, and where distribution models are constantly changing. High-quality operational services and cost-effective technical solutions are proving to be the winning combination that drives Asset Managers to seek support for their distribution strategies.

CACEIS's dedicated Fund Distribution Services business line combines the group's global operational coverage with local market expertise. A group-wide IT platform serves as the core TA system for both classic and alternative funds, with a central master data repository along with common communication and reporting platform which allows CACEIS to process orders 24/7, while reducing risk and ensuring data consistency. CACEIS Prime TA[®] is designed to deliver these benefits whilst optimising costs and increasing service quality.

BESPOKE SERVICE DESIGN The modular nature of CACEIS's fund distribution offer enables our teams to adapt the service in line with clients' evolving needs. Furthermore, with a broad network of local offices across Europe, North America and Asia, we have staff in our offices and call centres with a full understanding of your distribution partners' way of doing business.

We leverage our extensive experience to design distribution support services that best suit our clients' growth strategy and with all data centralised, we can offer services that add real value to your business. CACEIS is an international player, and seeks to offer the same high standards of service quality in every market where our clients distribute their products.
